

Den planlagte reduktion af de hvide fødselstal: Lækkede dokumenter fra Planned Parenthood, Rockefeller Foundation, Verdensbanken, US NSC (inkl. CIA, militær osv.)

- af Thuletime, 11. juni, 2021, LINK

En række lækkede og nu deklassificerede rapporter, skrevet i slut 60'erne og begyndelsen af 70'erne viser, at hvides/kaukaseres fødselsrater bevidst er blevet saboteret i den vestlige verden. Der er linket til rapporterne online i den digitale version af avisen, LINK. Essensen af rapporterne er angivet i slutningen af denne korte artikel:

1. **Population Planning**, United Nations' World Bank (1972), LINK
2. **Implications of Worldwide Population Growth ('The Kissinger Report')**, US National Security Council (includes CIA, military, etc.) (1974), LINK
3. **Activities Relevant to the Study of Population Policy for the U.S ('The Jaffe Memo')**, Planned Parenthood on behalf of John D. Rockefeller's Population Council (1969), LINK

Rapporterne beskriver i detaljer teknikker, med henblik på at reducere fødselsraterne. Stort set alle disse teknikker er blevet implementeret i hele Vesten, med undtagelse af nogle af de mest ekstreme metoder (fx tvangssterilisering) - dem vil 'man' muligvis forsøge at implementere via 'trojansk heste'.

I tråd hermed kunne det også tyde på, at dagsordenen for masseindvandring fra mellem- og fjernøsten siden 70'erne var en klassisk Problem-Reaktion-Løsning operation:

- Globalisterne ønsker at transformere den hvide/kaukasiske civilisation til en multikulturel- og multirace-civilisation
- Globalisterne ødelægger bevidst hvides/kaukasiskes fødselsrater via teknikker dokumenteret nedenfor.
- Globalisterne fortæller os, at vi har brug for masse-migrering af ikke-hvide for at 'fikse' vores lave fødselsrater.
- Globalister opnår deres ønskede multi-race samfund.

Nøglepunkterne i alle dokumenterne er bl.a.:

- Prævention skal gøres enkel og let tilgængelig
- Udvidelse af udbuddet af præventionsmidler
- Forsyning af vand med kemisk prævention
- Agitere for og opmuntre til sterilisation
- 'Indoktrinering' af børn og unge
- Brug statslig uddannelse til at fremme budskaber om familiebegrensning
- Brug NGO-propaganda til at argumentere for "den ideelle familiestørrelse"
- Opmuntre til homoseksualitet
- Forsinkelse af ægteskabsalderen via socialt pres og/eller lovgivning
- Opmuntre kvinder til at arbejde og søge højere uddannelse
- Opmuntre kvinder til at være politisk aktive
- Nedbringe privat boligejerskab (fremme udlejning)
- Beskatning og omfordeling af indkomster

THE FORMULA: White family + anti-family propaganda message.

“Low birth rates, huh? This totally justifies non-White mass migration.”

World Bank's: 'Population Planning' - "describes the Bank's efforts to help member countries reduce population growth rates" <http://archive.vn/ZNBRO>

I recently asked a panel of distinguished experts to review our activities in the population field within the World Bank.

They took a hard look at everything we have been doing since 1969, and they rightly reproached us for a tendency to treat population too much in isolation from our other activities.

In short, they asked us to think about the problem in a more comprehensive way—and deal with it accordingly.

They were right. And that is exactly what we plan to do.

Let me, now, summarize and conclude the central points I have made this evening.

Importance. It would mean that the period of rapid acceleration in the rate of growth of the world's population has finally reached its peak and is now definitely moving downward towards stabilization.

But as welcome as this is, the fact remains that the current rate of decline in fertility in the developing countries is too slow to avoid their ultimately arriving at stationary populations far in excess of acceptable levels.

Unless governments, through appropriate policy action, can accelerate the reduction in fertility, the global population may not stabilize below 11 billion. That would be a world none of us

But governments can take action, and can accelerate the process, given the resolve and determination to do so.

The critical point is this: for every decade of delay in achieving a net reproduction rate of 1.0—replacement-level fertility—the ultimate steady-state world population will be approximately 15% greater.

Governments, then, must avoid the severe penalties of procrastination, and try to hasten the process forward.

The factors that appear to be the most important are: health, education, broadly distributed economic growth, urbanization, and the enhanced status of women.

These factors are at work in the developing world today, but their progress is too slow to be fully effective.

There are two broad categories of interventions that governments must undertake: those designed to encourage couples to desire smaller families; and those designed to provide parents with the means to implement that desire.

The first set of interventions sets out to alter the social and economic environment that tends to promote fertility, and by altering it to create a demand among parents for a new and smaller family norm.

To create the demand for a change in family norm, governments should try to:

- Reduce current infant and child mortality rates sharply.
- Expand basic education and substantially increase the proportion of girls in school.
- Increase the productivity of smallholders in the rural areas, and expand earning opportunities in the cities for low-income groups.
- Put greater stress on more equitable distribution of income and services in the drive for greater economic growth.
- And above all else, raise the status of women socially, economically, and politically.

To satisfy the demand for a change in family norms, governments and the international community should:

- Provide a broad choice of the present contraceptive techniques and services to parents.
- Improve the delivery systems by which parents can get the services they wish.
- And expand present levels of research seeking better tech-
